PREFACE

Government publications embrace nearly all areas of human knowledge. They are both unique and important sources of authoritative information. Because government publications are not handled through normal book trade distribution channels or listed in standard indexing and abstracting services, as are trade books, they are likely to be overlooked and little used.

This work is intended to be a bibliographic guide directing the researcher to documents concerning Idaho, published by the United States government and the State of Idaho. It should help the researcher to identify or locate materials related to Idaho in all fields; the humanities, social sciences, natural sciences and technology, and vocational-technical education. The present work is the product of an extensive search of literature. The documents collections in libraries at the University of Idaho, Idaho State University, Boise State University, and the Idaho State Library were examined. This guide is by no means a comprehensive or definitive list, but it does attempt to illustrate categories of government publications which typify the various areas of human knowledge.

The bibliography is divided into three parts: U.S. government documents, State of Idaho documents, and publications of major institutions of higher education in Idaho. Titles cited are from the turn of the century to the present with emphasis on materials printed from 1970 through 1978. The guide records a selection of books, pamphlets, periodicals, and serials relating to Idaho, its regions, counties, and cities. The following types of publications are omitted: administrative reports, newspapers, newsletters, maps, and college and university theses and dissertations. The entries are arranged alphabetically, first by major government agencies and then by subordinate units under the parent organizations. Under each agency, reference materials are cited first, followed by general works and serials. Each federal document is identified by an entry

JUL 15 1980

number, followed by a title, personal author, publication date, pages, and Superintendent of Documents Classification number or accession number (a six-digit number prefixed with two letters indicates a publication of the National Technical Information Service). Periodical citations include title, frequency, and beginning date of publication, when available. Bibliographic information for Idaho documents follow the same pattern as U.S. documents except the call number is not given. To aid researchers in locating materials, a separate author and detailed subject is appended.

My debt is a financial one. Thanks to the ISU Faculty Research Committee, a research grant enabled me to launch and finish this work.
